

# PORTABLE ENROLLMENT SYSTEM

Part of GET Group's Identity Management portfolio, the self-contained Portable Enrollment System enables authorities to accurately capture and register citizen biometrics and biographical data at remote locations irrespective of the availability of supporting infrastructure. The security and integrity of the initial enrollment and registration of data is of extreme importance to the overall process of document issuance, and the Portable Enrollment System ensures the fulfillment of all quality, consistency and security criteria.

The Portable Enrollment System's components fit into a ruggedized suitcase, requiring no external power or connectivity; thus facilitating enrollment operations at border control points or similarly remote operational environments. Furthermore, the solution is equipped with the latest enrollment technologies that meet and exceed the most stringent data capture requirements; an aspect of major significance in government programs for the issuance of high-assurance credentials.

The Portable Enrollment System can be easily customized to incorporate features and devices based on project requirements, ranging between basic data capture and biometric enrollment, issuance and QA in a single suitcase. The lightweight suitcase can be rapidly deployed by one person, and all units and devices within the solution are certified for robustness.

## Portable Enrollment System offers the following features:

- ▷ An integrated and autonomous solution
- ▷ Robust and compact design
- ▷ Customizable kit components
- ▷ Intuitive setup and operations
- ▷ Fast deployment and enrollment
- ▷ Optimum data security
- ▷ Certified software and hardware
- ▷ Supports various biometrics
- ▷ Autonomous powering
- ▷ Compliant with international safety and environmental standards
- ▷ Easy integration with third-party enrollment systems

## Applications

- ▷ National ID cards
- ▷ Biometric passports
- ▷ Health insurance cards
- ▷ Visas
- ▷ Voter cards
- ▷ Government documents
- ▷ Residence permits

## GET Enroll

GET Enroll is an intuitive and user-focused web application developed for the management of the biometrics and biographical data registration process using Portal Enrollment System.

## System Features

- ▷ Customizable enrollment workflow
- ▷ Can be operated online, semi-online or offline
- ▷ Real-time ISO 19794 compliance verification
- ▷ Access levels and user privileges management
- ▷ Integration with third-party biometrics readers, scanners and systems
- ▷ Supports enrollment centers, portable kits, and self-service enrollment kiosks
- ▷ Encryption of all data and transactions

# WHY GET GROUP
